

OKLAHOMA STATE UNIVERSITY FIRE PROTECTION PUBLICATIONS BUILDING

The OSU Fire Protection Publications Office outgrew their building. KKT worked closely with end-users to design an addition which accommodates staff, allows room for growth, complements the existing architecture, and met budget requirements. Our renovation of this existing building created comfortable and efficient spaces for optimal workflow. This project exemplifies the KKT design process built around the collaboration of the architect, engineers, construction manager, and client to design a building that meets the client's goals and dreams for a project.
