

SKY FITNESS AT PROMENADE

This adaptive reuse project formed a premier fitness facility from a former major retailer's space at a busy intersection in midtown Tulsa. A 28-foot rock climbing wall captures the eye at the entrance and continues to the second floor, overlooking the University of Oklahoma's Tulsa campus. The first floor includes locker rooms, the Sky Café, and a 2,500 square foot children's activity center. The second floor contains a large open workout area featuring weight- and cardio-machines and four enclosed aerobic studios. Many curved or angled glass walls, an unfinished steel staircase, and exposed duct work give the space a contemporary ethos with an industrial edge.
