

## THE CHILDREN'S CENTER REHABILITATION HOSPITAL

The Children's Center Rehabilitation Hospital serves children who are traumatically injured or dealing with debilitating illnesses. KKT worked closely with hospital leadership to create a freestanding addition on the campus, allowing the hospital to serve hundreds more medically fragile children per year. The 100,000 SF addition includes specialty spaces such as patient rooms designed to accommodate family members staying with a child 24 hours a day, 16 long-term critical care units, 24 short-term units, several diagnostic and treatment rooms used for a full spectrum of therapy services, an out-patient clinic, a chapel, multiple classrooms, and staff support spaces. A five-story new-construction 348-space parking garage completed the campus transformation.
