

CHARLES PAGE HIGH SCHOOL FRESHMAN ACADEMY & STEM CENTER

The Freshman Academy & STEM Center is a 58,000 sf addition to Charles Page High School in Sand Springs providing much needed facilities and an updated front entrance and facade to the building. A full site-options study was done to gain community support and ensure this was the best move for the previously separate Ninth Grade center. This building addition adds 24 new classrooms in addition to 4 new fully outfitted STEM classrooms. The new grand lobby, learning stair, multipurpose commons and break out spaces promote Sand Springs' desire to improve collaboration among students. The renovation also updated several classrooms, administrative spaces, restrooms, and hallways within the existing building.
