

OKLAHOMA STATE UNIVERSITY GREENHOUSE LEARNING CENTER

This state-of-the-art facility features five greenhouses with cutting-edge irrigation systems, precise climate and humidity controls, and an isolated entomology greenhouse. The head house includes a classroom, office space, plant-preparation area, and storage space for soil, equipment, fertilizer, and pest-management materials. A large foyer provides space for student club meetings. These new buildings give students an industry-standard learning facility to prepare them for a variety of horticultural-based careers.
