

BOK NOC/SOC DEPARTMENT

The BOK NOC/SOC department renovation for 140 employees includes offices, conference rooms, server storage and a cyber threat command center. The client wanted to make the space feel more open and appealing to promote and retain prospective employees. To achieve this and maximize the space layout, designers used glass walls and dividers, rounded corners and linear design elements to increase openness and connectivity. Futuristic workstations, furniture, wall, and acoustic ceiling treatments energize the space and create an appealing work environment. The command center is outfitted with a large wall of smart screens with large workstations and access to a private "War Room" for strategic sessions.
