

SAINT FRANCIS CANCER CENTER INFUSION

KKT designed a new lobby expansion and full renovation to the north end of the Saint Francis Cancer Center. This renovation added an extensive entry lobby and waiting area, a café and dining space, and more importantly - updated infusion treatment areas, infusion bays, and support spaces. This project scope of over 41,000 square feet was completed while the building remained operational, providing critical services to patients and their families. This project is a further continuation of our design work for the Cancer Center after a successful addition for radiology that was completed in 2020. We are honored to work with Saint Francis Health System to provide spaces focused on patient care and healing at a critical time in their treatment.
